CLINICAL TRIAL FACT SHEET

Study of Vorinostat (MK0683) an HDAC Inhibitor, or Placebo in Combination with Bortezomib in Patients with Multiple Myeloma

This study is currently recruiting participants.

Sponsored by: Merck
Information provided by: Merck

ClinicalTrials.gov Identifier: NCT00773747 Merck study ID number: Vantage 088

Purpose

Study of bortezomib administered in combination with vorinostat or placebo in patients with relapsed or refractory multiple myeloma.

Eligibility

Ages Eligible for Study: 18 years and older

Genders Eligible for Study: Both Accepts Healthy Volunteers: No

Criteria

Inclusion Criteria:

- Patient is 18 years of age or older
- Patient has an established diagnosis of multiple myeloma based on the myeloma diagnostic criteria
- Patient has received at least 1 but not more than 3 prior anti-myeloma regimens and has progressive disease after the most recent treatment regimen
- Patient must have adequate organ function

Exclusion Criteria:

- Patient has had a prior allogeneic bone marrow transplant or plans to undergo any type of bone marrow transplantation within 4 weeks of the initiation of study therapy
- Patient has known hypersensitivity to any components of bortezomib or vorinostat
- Patient has active Hepatitis B or C, plasma cell leukemia, or is HIV positive
- Patient has had prior treatment with vorinostat or HDAC inhibitors
